Professional Summary

Dynamic Data & Analytics expert with over a decade of expertise in enterprise IT, cloud infrastructure, cybersecurity, and system integration. Demonstrated success in driving data-centric transformations, designing scalable infrastructures, and aligning technological strategies with organizational objectives. Proficient in AWS, SQL, and data governance, with proven leadership in managing cross-functional teams and spearheading strategic initiatives. Recently earned a Data Science Picodegree, further strengthening skills in big data, Python, machine learning, and advanced visualization tools.

Work Experience

Vitality Health, Maseru, Lesotho

September 2025 - Present

Digital Health Information Systems Manager

- Develops and oversee implementation of DHIS strategies aligned with business goals.
- Establish internal DHIS policies, procedures, and compliance frameworks.
- Oversee servers, network connectivity, workstations, and cloud-based solutions.
- Responsible for coordinating the development of DHIS department Business Plan and Budget.
- Provide leadership for user support, helpdesk functions, and troubleshooting.
- Develop staff DHIS training programs to ensure digital literacy and secure practices.
- Develop and implement cybersecurity strategies to protect sensitive data.
- Manages and designs the reporting environment, including data sources, security, and metadata.
- Collaborated with Ministry of Health on noncommunicable disease control in Lesotho project.
- Provides technical expertise in data storage structures, data mining, and data cleansing.

IT Manager

- Administered and maintained enterprise IT infrastructure, including two virtualized Windows servers for domain services and Sage ERP hosting.
- Directed the integration of a real-time benefit bridging system (Medikredit) to enable seamless member benefit data sharing with healthcare service providers during online claim processing.
- Engineered and deployed a scalable network infrastructure for Mamoth's head office, integrating seven departments and two boardrooms with high-speed connectivity and centralized IT management.
- Introduced and managed Microsoft 365 and azure-based services for efficient collaboration.
- Experience with Workday or similar cloud-based enterprise systems.
- Participated in operational research and multisectoral advocacy initiatives for disease control.
- Participated in the implementation of Mamoth VPN and cybersecurity policies to data security.
- Developed and presented IT strategy documents that supported Mamoth's strategic goal together with their respective annual work plan documents.
- Established an in-house contact center to handle inquiries for Mamoth Health and Mamoth Funeral Services with integrated data tracking, significantly enhancing customer service efficiency.
- Launched a centralized reporting dashboard using QlikView for executive decision-making on product performance, claims trends, and membership behavior.
- Implemented a predictive analytics pilot leveraging historical claims data to pinpoint high-risk member profiles, enabling risk-based underwriting and proactive intervention strategies.
- Participated in the installation and configuration of Mamoth's PBX system, setting up IP phones in each office to enhance communication and support efficient operations.

IT Officer

June 2014 – January 2017

- Developed a business case for changing Mamoth Health administration system.
- Experience with web-based management systems such as practice and pharmacy management systems.
- Led the implementation of new medical aid administration system in 2016, including business requirements development, requirements mapping, and data migration in collaboration with Afrocentric and MediKredit.
- Collaborated with international partners or participated in cross-border health initiatives.
- Developed and executed test cases for the medical aid administration system, ensuring thorough testing and documentation.

- Participated in the implementation of a multiprotocol label switching (MPLS) link between Mamoth and suppliers in South Africa, improving connectivity and data transmission reliability.
- Developed integrated web applications that streamlined processes, resulting in a 40% decrease in support tickets and increasing operational efficiency.
- Scheduled daily administration system data backup using MS SQL database management software, ensuring data integrity and availability for critical operations.
- Conducted Training for over 21 staff members on new IT systems and applications.
- Introduced cloud-based antivirus and activated web-control to manage usage of social media platforms.
- Upgraded Mamoth Health PBX lines by 4 to ensure incoming calls reach our front desk.
- Procured and configured multipurpose printers and implemented security measures to control paper usage.
